

TABLE OF CONTENTS

PERIODIC TABLE	INSIDE FRONT COVER
CONVERSIONS AND CONSTANTS	LAST PAGE
LIST OF ELEMENTS	INSIDE BACK COVER
1. BACKGROUND AND BASICS	1
1.1 <i>The Grand Puzzle</i> 1.2 <i>One REALLY BIG item</i> 1.3 <i>Survival Guide</i>	
1.4 <i>Measurement</i> 1.5 <i>Can we ever be sure about uncertainty?</i> 1.6 <i>Sigfigs</i>	
1.7 <i>Problem solving</i>	
2. CHEMICAL UNITS AND THEIR IDENTITIES, Part 1	13
2.1 <i>Atoms</i> 2.2 <i>Identity</i> 2.3 <i>Mass</i> 2.4 <i>The elements and the Periodic Table</i>	
2.5 <i>Group tours</i> 2.6 <i>Monatomic versus polyatomic: one versus many</i>	
3. CHEMICAL UNITS AND THEIR IDENTITIES, Part 2	25
3.1 <i>Ions and ionic compounds</i> 3.2 <i>Covalent compounds</i> 3.3 <i>What to do about polyatomic ions</i>	
3.4 <i>Wrap up</i>	
4. CHEMICAL UNITS AND THEIR IDENTITIES, Part 3	31
4.1 <i>What's in a name?</i> 4.2 <i>We start with ionics.</i> 4.3 <i>We're ready to name an ionic compound.</i>	
4.4 <i>Binary covalent compounds</i> 4.5 <i>We're done. Almost.</i> 4.6 <i>Other systems</i>	
5. CHEMICAL UNITS AND MASS	48
5.1 <i>Still stuck on u.</i> 5.2 <i>We jump to the real world.</i> 5.3 <i>Percent composition</i>	
5.4 <i>An empirical approach</i>	
6. CHEMICAL REACTIONS	58
6.1 <i>Reactions and equations</i> 6.2 <i>Getting into details</i> 6.3 <i>Kinds of reactions: combustion</i>	
6.4 <i>Handling multi-step processes</i>	
7. STOICHIOMETRY, Part 1	69
7.1 <i>We begin stoichiometry with mass.</i> 7.2 <i>Using dimensional analysis</i>	
7.3 <i>General approach</i>	
8. STOICHIOMETRY, Part 2	78
8.1 <i>What do we do with the leftovers???</i> 8.2 <i>Excess and limiting</i> 8.3 <i>The real world versus the ideal world</i>	
9. STOICHIOMETRY, Part 3	85
9.1 <i>Liquid reagents</i> 9.2 <i>The solution to solutions</i> 9.3 <i>Now we're ready for solution stoichiometry.</i>	
9.4 <i>Recapitulate</i>	
10. AQUEOUS SOLUTIONS AND REACTIONS: Background	93
10.1 <i>Water basics</i> 10.2 <i>Why is water weird?</i> 10.3 <i>Balance</i> 10.4 <i>Technical aside</i>	
11. AQUEOUS REACTIONS, Part 1	102
11.1 <i>Independent ions</i> 11.2 <i>Precipitation</i> 11.3 <i>Acids and bases</i>	
12. AQUEOUS REACTIONS, Part 2	114
12.1 <i>Names and formulas for acids</i> 12.2 <i>Neutralizations</i> 12.3 <i>It's a gas!</i> 12.4 <i>Back to balance</i>	
13. AQUEOUS REACTIONS, Part 3	125
13.1 <i>Redox</i> 13.2 <i>Oxnos</i> 13.3 <i>Uses of oxnos</i>	

14. AQUEOUS REACTIONS, Part 4	132
14.1 Some preliminaries	
14.2 Oxnos method	
14.3 It's your turn.	
15. AQUEOUS REACTIONS, Part 5	140
15.1 Examples	
15.2 Titration	
16. GASES, Part 1	146
16.1 The gas phase	
16.2 Can you feel the pressure?	
16.3 The math of gas	
16.4 STP and d	
16.5 Mixtures	
17. GASES, Part 2	159
17.1 Stoichiometry with gases	
17.2 Molecules in motion	
17.3 The need for speed	
17.4 Diffusion, effusion, deflation and inflation	
17.5 Reality check	
18. ENERGY, Part 1	173
18.1 Economics	
18.2 Joule	
18.3 Terminology and such	
18.4 Thermochemical examples	
18.5 Can you take the heat?	
19. ENERGY, Part 2	184
19.1 Four important aspects: one you knew and three are new.	
19.2 How good are your standards?	
19.3 We are finally getting to where we want to be.	
19.4 Stoichiometry	
19.5 Calories from the Sun	
20. THE ATOM	198
20.1 Welcome	
20.2 Basics and background	
20.3 Stand and wave.	
20.4 Duality	
20.5 Orbits	
20.6 Relax, don't get too excited.	
20.7 Orbit for orbits	
21. LIGHT, MATTER AND WAVES	211
21.1 Here and now	
21.2 Light and matter	
21.3 Electron duality	
21.4 Quantum numbers	
21.5 Orbitals	
21.6 Shapes of orbitals	
22. MANY-ELECTRON ATOMS	223
22.1 Spin	
22.2 Splitting subshells	
22.3 Configurations	
22.4 The general fill sequence in table format	
23. CONFIGURATIONS AND CONSEQUENCES, Part 1	235
23.1 Reading the Periodic Table	
23.2 Ions	
23.3 Consequences and trends	
23.4 Some important conclusions	
24. CONFIGURATIONS AND CONSEQUENCES, Part 2	249
24.1 Ion charge	
24.2 Sizing up an ion	
24.3 Taking a spin on magnetism	
25. BONDING RELATIONSHIPS	257
25.1 --•• --- - •••	
25.2 More ionics	
25.3 Covalent bonds	
25.4 Order! Order!	
25.5 Greed	
25.6 Extending the gamut	
25.7 Applying to compounds	
26. THE POLYATOMIC UNIT, Part 1	271
26.1 Duets, oddballs, deficiencies and excesses	
26.2 Lewis	
26.3 Examples	
27. THE POLYATOMIC UNIT, Part 2	282
27.1 Delocalization	
27.2 More food for thought	
27.3 Return to oxnos	
27.4 Formal charge	
27.5 A formal application	
28. SHAPE, Part 1	294
28.1 VSEPR	
28.2 How repulsive!	
28.3 What shape are we in?	
29. SHAPE, Part 2 and POLARITY	303
29.1 More examples	
29.2 Three summaries	
29.3 More than one central atom	
29.4 Another angle on VSEPR	
29.5 Molecular polarity	
29.6 Stage 3	

30. ORBITALS, Part 1	314
30.1 VBA and/or MOA	
30.2 The Valence Bond Approach	
30.3 Hybridization sets	
30.4 How to use the Valence Bond Approach	
30.5 A closing comment	
31. ORBITALS, Part 2	326
31.1 Bond orbital type	
31.2 When the moon hits your eye like a big sigma pi...	
31.3 Another point for emphasis	
31.4 Stage 4	
32. ORBITALS, Part 3	333
32.1 The Molecular Orbital Approach	
32.2 Antibonding orbitals	
32.3 The relative energies of molecular orbitals	
32.4 Configurations and consequences	
33. ORBITALS, Part 4 and METALLIC BONDING	340
33.1 More configurations	
33.2 Further aspects	
33.3 Bands and conductors	
Appendix A: THERMOCHEMICAL TABLES	A-1
Appendix D: ANSWERS TO END-OF-CHAPTER PROBLEMS	D-1
